

REMARKS/ARGUMENTS

Examiner's objections concerning the drawings

The Applicant has included new substitute drawings that should be used in lieu of the old drawings. Figure 1 has been amended in these drawings to show a link/connectivity between a battery, battery post, and battery terminal. Also, figures 5-7 have been placed in a more acceptable format for this application.

Examiner's first rejection

The Examiner has rejected claims 1-9 under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. Applicant has modified the specification to the extent necessary to fully understand the claims.

As seen above in the preceding section, the applicant has added language showing how the battery is connected in figure 1. While not adding a "battery" in figures 5 – 7, the presence of the battery in figure 1 should be enough to cause a person to understand the manner in which the present invention functions.

Applicant believes that the given changes and the description herein fully addresses the Examiner's 35 U.S.C. 112 concerns. If not, the Applicant asks that the Examiner further clarify the concerns present.

CONCLUSION

For all of the above-described reasons, applicant submits that the specifications and claims are now in proper form, and that the claims define patentability over the prior art. In addition, applicant believes that his arguments in the "Remarks" section successfully traverses the objections and rejections brought forth by the Examiner in the Office Action. Therefore, the applicant respectfully submits that this application is now in condition for allowance, which action he respectfully solicits. If the Examiner feels that some of the dependent claims are allowable, the Applicant asks the Examiner to allow the Applicant to make any amendments to the allowed claims to incorporate all the limitations of the base claim and any intervening claims.

Respectfully Submitted,

Matthew J. Peirce, Esq.
